Brand Finance®

The annual report on the world's most valuable brands February 2017

Foreword

David Haigh, CEO Brand Finance

What is the purpose of a strong brand; to attract customers, to build loyalty, to motivate staff? All true, but for a commercial brand at least, the first answer must always be 'to make money'. Huge investments are made in the design, launch and ongoing promotion of brands. Given their potential financial value, this makes sense. Unfortunately, most organisations fail to go beyond that, missing huge opportunities to effectively make use of what are often their most important assets. Monitoring of brand performance should be the next step, but is often sporadic. Where it does take place it frequently lacks financial rigour and is heavily reliant on qualitative measures poorly understood by non-marketers. As a result, marketing teams struggle to communicate the value of their work and boards then underestimate the significance of their brands to the business. Skeptical finance teams, unconvinced by what they perceive as marketing mumbo jumbo may fail to agree necessary investments. What marketing spend there is can end up poorly directed as marketers are left to operate with insufficient financial guidance or accountability. The end result can be a slow but

steady downward spiral of poor communication, wasted resources and a negative impact on the bottom line.

Brand Finance bridges the gap between the marketing and financial worlds. Our teams have experience across a wide range of disciplines from market research and visual identity to tax and accounting. We understand the importance of design, advertising and marketing, but we also believe that the ultimate and overriding purpose of brands is to make money. That is why we connect brands to the bottom line. By valuing brands, we provide a mutually intelligible language for marketers and finance teams. Marketers then have the ability to communicate the significance of what they do and boards can use the information to chart a course that maximises profits. Without knowing the precise, financial value of an asset, how can you know if you are maximising your returns? If you are intending to license a brand, how can you know you are getting a fair price? If you are intending to sell, how do you know what the right time is? How do you decide which brands to discontinue, whether to rebrand and how to arrange your brand architecture? Brand Finance has conducted thousands of brand and brandedbusiness valuations to help answer these questions.

Brand Finance's recently conducted share price study revealed the compelling link between strong brands and stock market performance. It was found that investing in the most highly branded companies would lead to a return almost double that of the average for the S&P 500 as a whole. Acknowledging and managing a company's intangible assets taps into the hidden value that lies within it. The following report is a first step to understanding more about brands, how to value them and how to use that information to benefit the business. The team and I look forward to continuing the conversation with you.

Branded Business Value

A brand should be viewed in the context of the business in which it operates. For this reason Brand Finance always conducts a Branded Business Valuation as part of any brand valuation. Where a company has a purely monobranded architecture, the business value is the same as the overall company value or 'enterprise value'.

In the more usual situation where a company owns multiple brands, business value refers to the value of the assets and revenue stream of the business line attached to that brand specifically. We evaluate the full brand value chain in order to understand the links between marketing investment, brand tracking data, stakeholder behaviour and business value to maximise the returns business owners can obtain from their brands.

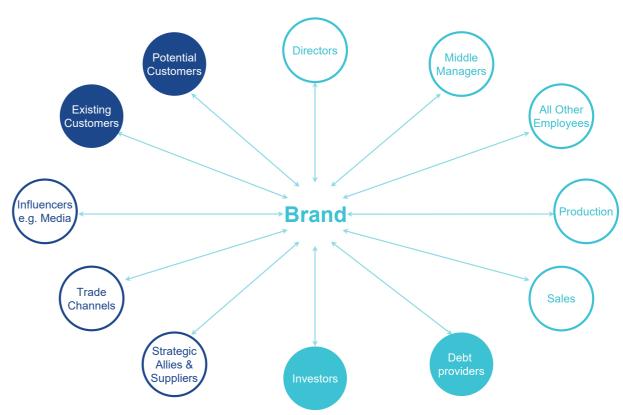

Brand Contribution

The brand values contained in our league tables are those of the potentially transferable brand asset only, but for marketers and managers alike. An assessment of overall brand contribution to a business provides powerful insights to help optimise performance.

Brand Contribution represents the overall uplift in shareholder value that the business derives from owning the brand rather than operating a generic brand.

Brands affect a variety of stakeholders, not just customers but also staff, strategic partners, regulators, investors and more, having a significant impact on financial value beyond what can be bought or sold in a transaction.

Effect of a Brand on Stakeholders

Brand Value

In the very broadest sense, a brand is the focus for all the expectations and opinions held by customers, staff and other stakeholders about an organisation and its products and services. However, when looking at brands as business assets that can be bought, sold and licensed, a more technical definition is required.

Brand Finance helped to craft the internationally recognised standard on Brand Valuation, ISO 10668. That defines a brand as "a marketing-related intangible asset including, but not limited to, names, terms, signs, symbols, logos and designs, or a combination of these, intended to identify goods, services or entities, or a combination of these, creating distinctive images and associations in the minds of stakeholders, thereby generating economic benefits/value"

Brand Strength

Brand Strength is the part of our analysis most directly and easily influenced by those responsible for marketing and brand management. In order to determine the strength of a brand we have developed the Brand Strength Index (BSI). We analyse marketing investment, brand equity (the goodwill accumulated with customers, staff and other stakeholders) and finally the impact of those on business performance.

Following this analysis, each brand is assigned a BSI score out of 100, which is fed into the brand value calculation. Based on the score, each brand in the league table is assigned a rating between AAA+ and D in a format similar to a credit rating. AAA+ brands are exceptionally strong and well managed while a failing brand would be assigned a D grade.

4. Brand Finance Global 500 February 2017 5.

Methodology

League Table Valuation Methodology

Brand Finance calculates the values of the brands in its league tables using the 'Royalty Relief approach'. This approach involves estimating the likely future sales that are attributable to a brand and calculating a royalty rate that would be charged for the use of the brand, i.e. what the owner would have to pay for the use of the brand—assuming it were not already owned.

The steps in this process are as follows:

1 Calculate brand strength on a scale of 0 to 100 based on a number of attributes such as emotional connection, financial performance and sustainability, among others. This score is known as the Brand Strength Index, and is calculated using brand data from the BrandAsset® Valuator database, the world's largest database of brands, which measures brand equity, consideration and emotional imagery attributes to assess brand personality in a category agnostic manner.

How We Help to Maximise Value

6. Brand Finance Global 500 February 2017 **Brand Finance** Global 500 February 2017 7.

Global 500

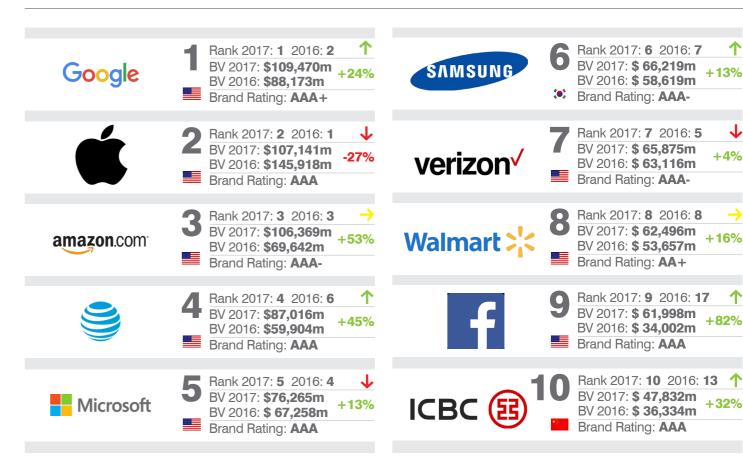

Apple has for the last five years held sway as the world's most valuable brand. Apple was once a paragon of branding excellence. It has a meticulously constructed, sleek and innovative visual identity that runs consistently through all its products, services and retail sites. Its monobrand structure created marketing efficiencies and helped to cement its logo as an icon of the 21st century. Reliability, user-friendly interfaces, knowledgeable staff and, most importantly, its transformative technology meant that the brand fulfilled its promises. Loyalty and advocacy reached cultish proportions with fans waiting days outside Apple stores for the latest release.

However, Apple's evangelists are beginning to lose their faith. The snaking queues of early adopters have shrunk almost to the point of invisibility. Apple has failed to maintain its technological advantage and has repeatedly disillusioned its advocates with tweaks when

material changes were expected.

Put simply, Apple has over-exploited the goodwill of its customers, it has failed to generate significant revenues from newer products such as the Apple Watch and cannot demonstrate that genuinely innovative technologies desired by consumers are in the pipeline. Its brand has lost its luster and must now compete on an increasingly level playing field not just with traditional rival Samsung, but a slew of Chinese brands such as Huawei and OnePlus in the smartphone market, Apple's key source of profitability.

Brand Finance's analysts had remained bullish about Apple's potential to recover its lost momentum, but the rot has now truly set in, with brand value falling 27% since early 2016 to US\$107 billion, which sees it lose its status as the

world's most valuable brand.

Apple's loss has been Google's gain. Six years after it last held the title in 2011, Google is now the world's most valuable brand with a value of US\$109 billion.

It is perhaps fitting that the brand which enables the world's biggest brands reach their customers and build their own brand equity (through search and advertising respectively) has itself become the world's most valuable. Google remains largely unchallenged in its core search business, which is the mainstay of its advertising income. Ad revenues were up 20% in 2016, despite a fall in cost per click, as ad budgets are increasingly directed online. Desktop advertising remains far more lucrative than mobile, despite its prematurely diagnosed decline. Though mobile advertising has proved a challenge to monetize

effectively, Google is persevering. For example 2016 saw the introduction of 'bumper ads', short, 6-second video ads better suited to the short clips that form an increasing part of media consumption on Google sites such as Youtube.

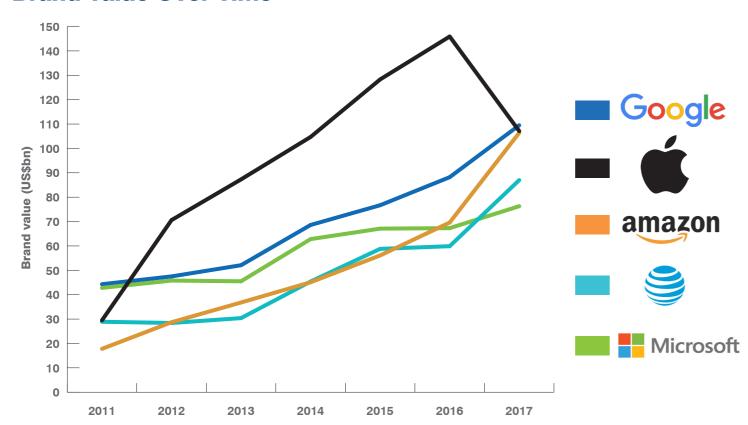

Increasing revenues are not the only explanation for Google's success however. Its brand strength score is up by two points indicating improving underlying brand equity. Some are wont to question the significance of brand equity for tech firms, convinced that the functional properties of a particular service are the only relevant concern. However, a brand can have a powerful impact both in the growth phase and in sustaining long term success for tech brands. As the examples of Apple and Yahoo arguably show, accumulated brand equity can enable a tech business to retain customers or even command a price premium that its products and services might not

Brand Value Over Time

otherwise sustain. Meanwhile intensive, well-targeted marketing communications behind a credibly executed brand can be fundamental to building the critical mass and network effect required to make businesses such as Facebook and Uber succeed. Google's ability to attract ad budgets may be in large part to its user base. However its third party and business services have only been able to expand as rapidly as they have thanks to the strength of the Google brand.

Google's brand architecture is somewhat more complicated than Apple's. It has a hybrid structure that is somewhat difficult to classify. The Google master brand is prevalent, applied on key, high profile services such as search and maps. However multiple brands have been created or acquired that are merely 'endorsed' by the Google brand such as Android and Chrome. There are also brands that merely sit within the

Google stable, such as Youtube, which has retained its brand long after acquisition.

This diversified approach may well just be the consequence of rapid diversification and repeated acquisitions. However there may be something more strategic at work too. Google is attracting more and more scrutiny over the erosion of personal privacy and potential monopolistic behavior. In this climate, a gargantuan mono-branded approach is probably ill-advised. Google moved to further distance itself from this approach in 2015 with a corporate restructure that saw Google become a division of new parent Alphabet. Its shift towards a 'house of brands' approach makes sense for operational reasons, but brand has been critical too. Diversification limits the contagion of one negative story affecting other branded businesses within the overall enterprise. It also

helps improve brand equity with one frequently overlooked stakeholder group. Government organisations might not be frequently discussed as a brand audience but they can have a potentially fundamental effect on firms' profitability and hence shareholder value. By diversifying its brand portfolio, Alphabet will hope to avoid perceptions of excessive scale and divert regulatory attention.

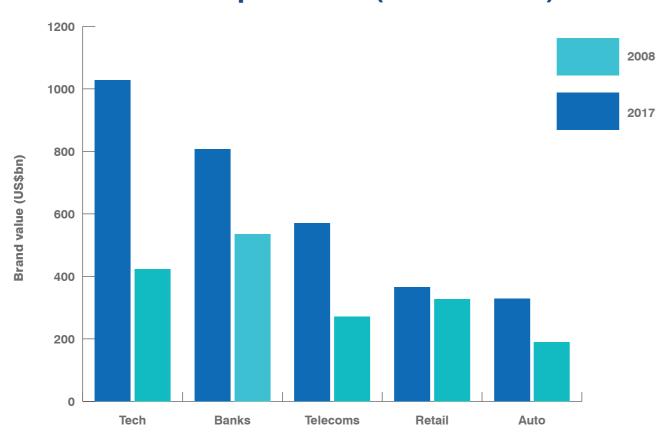

Amazon's 53% brand value growth meant it nearly secured the top spot for itself this year. The firm is growing strongly as it continues to both reshape the retail market and to capture an ever larger share of it. Amazon Fresh, its grocery service, is still relatively limited in scale but this year began operating overseas for the first time, serving Central and East London initially. Amazon has stated it will create 100,000 jobs in the US over the next 18 months. Such confidence

suggests that Amazon may well see a new brand at the top of the Brand Finance Global 500 in 2018.

Facebook continues to climb the ranks following 82% brand value growth, but has been outdone by China's biggest tech brands. Alibaba, WeChat and Tencent have grown by 94%, 103% and 124% respectively. WeChat has over 850 million users and despite being largely confined to its domestic market, could soon start to challenge Facebook for user numbers. WeChat offers a more extensive range of services, than any comparable brand, from mobile payments to video games and text messaging to video sharing. As a result it is far more embedded in the life of the average user, even replacing work emails for many Chinese, opening the door to brand extension and further growth.

10. Brand Finance Global 500 February 2017 11.

Brand Value Total for Top 5 Sectors (2008 and 2017)

After tech, banking is the largest sector by brand value. Financial services brands comprise 20% of the Global 500. Chinese banks' brand value growth has been rapidly outpacing that of European and North American competitors since the study's inception. The nation's vast population, organic expansion, foreign M&A activity and positive relationships with Chinese consumers are a few common attributes Chinese banks share which serve to explain the immense growth of this industry. Not only has China's ICBC claimed the title as the most powerful banking brand, it also dethrones Wells Fargo as the most valuable financial brand in the world. Wells Fargo fell 6% after a turbulent year for the brand. Damage to its reputation has seen its brand significantly underperform this year. The bank has endured a tough year and has been rocked by scandals, lawsuits and resignations. The company has suffered due to the recent

scandal where over 2 million accounts and credit cards were opened/applied for without customer knowledge or consent. Its brand value to market capitalization ratio is just 14% in contrast to ICBC's 20%. Although its brand equity will take a while to repair, this particularly low figure suggests that a slight rebound could occur and that Wells Fargo may have the potential to recapture the top spot in 2018 or 2019. On the other hand, American payment service providers Visa and Mastercard enjoyed an 81% and 58% increase in brand value, respectively. As their core markets continue to move towards a cashless society, consumers become increasingly reliant on the services they provide.

AT&T saw its brand value grow 45% this year to US\$97 billion, overtaking Verizon as the most valuable telecoms brand. Its acquisitive growth in South America and Mexico follows its 2015

takeover of DirecTV. It has been rewarded with continued growth in brand value and an increase in market share. AT&T has taken a largely monobrand approach to its brand architecture.

Following the acquisition of DirecTV, it was quick to create an 'endorsed' brand, inserting its logo and 'Now part of the AT&T family' beneath the DirectTV wordmark. It has since moved a step closer to a unified branding, with the AT&T master logo enlarged and the DirecTV wordmark reduced. 2016 has also seen a refresh of the DirecTV logo, which, though of less strategic importance, has practical advantages in that the simplified design will be more easily rendered in both physical and digital formats.

Telecoms is the source of the Global 500's highest new entrant. Charter's Spectrum brand has ballooned in size following Charter's takeovers of Time Warner Cable and Bright House Networks, which were subsequently rebranded. Spectrum's brand value is US\$15.7 billion.

STC, Saudi Arabia's most valuable brand and the Middle East's most valuable telecoms brand, grew 11% in value this year to US\$6.2 billion. The Riyadh-based giant demonstrates a departure from its once traditional methods; it is embarking down a path of 'humanisation', re-engaging its many stakeholders with a fresh, personable outlook. A clear indication of its success is the 5-point increase in its brand strength index score, proving that putting some heart into it pays off.

Nokia is one of the more remarkable success stories of 2017. It was a regular feature in the Brand Finance Global 500 since the study's inception and reached a peak brand value of US\$33.1 billion in 2008, making it the world's 9th most valuable brand. Its slow response to the emergence of smart phone technology led to a well-documented decline at the hands of Apple and Samsung. Brand Value sunk to a low of just of US\$2 billion in 2014.

DIRECTY

12. Brand Finance Global 500 February 2017 13.

Good things come in fours

However, after a period of consolidation, Nokia is firmly on the road to recovery. After the mobile device division was sold off, the brand survived as Nokia Networks (rebranded from NSN). Nokia Networks acquired a controlling stake in Alcatel-Lucent in 2016 to create one of the largest players in the sector. Alcatel-Lucent has since been rebranded as Nokia, further reinforcing the position of the Finnish brand.

2017 marks another turning point in the Scandinavian giant's saga, as the Nokia brand will once again be visible on mobile devices following the launch of the 'Nokia 6'. The device comes from HMD (founded by Nokia veterans in 2016) and promises to be the first of many, with further releases expected at Mobile World Congress in February. This newfound momentum sees Nokia's brand value climb 62% to US\$4.9 billion while the fundamental brand equity measures are improving too, which sees Nokia's brand strength rating upgraded from AA to AA+.

Coca-Cola was the world's most valuable brand across all industries in 2007, with a brand value of US\$43.1bn. Increasing concerns over the links between carbonated drinks and obesity have begun to undermine what the Coca-Cola brand has represented for over one hundred years. Over the last few years Coca-Cola has rolled out a much publicized initiative to consolidate Coke, Diet Coke, Coke Zero and Coke Life under one master brand. Unfortunately however it has failed to address changing consumer tastes in a substantive way. As alternatives marketed as healthier or more natural have fragmented the soft drinks market, Coca-Cola's brand value has declined. In the last year it has dropped 7% to US\$31.9 billion, putting it 27th across all industries. Pepsi is suffering from the same trend, falling 4%.

The same trend is evident in the fast food industry. The brand values of McDonald's, KFC, Subway and Domino's have all fallen heavy competition in an increasingly fragmented market

with healthier challenger brands offering greater choice for consumers. Tim Horton's has bucked the trend however, with a 45% increase in brand value. The coffee chain offering may be considered run-of-the-mill to some, but its surge indicates that there is an under-exploited appetite for reasonably priced rather than premium coffee. Its merger with Burger King has benefitted both brands (Burger King's brand value is up 11%) as well as shareholders; the brand's combined market capitalization is US\$4 billion higher now than at the time of the merger. The deal provides opportunities for improved distribution and cost saving. Tim Horton's devotees may be concerned at the loss of a Canadian icon but the strength and unique identities of both brands would make the disappearance of either almost unthinkable.

For the last five years Emirates, now ranked 264th, had held the title of world's most valuable airline brand, but 2017 sees a dramatic shift. Last year, Emirates' half-year profits plunged 75%. The lower oil price might have been expected to help all airlines, however it has worked against the Gulf carriers, reducing demand from its home region. The lower price has also levelled the playing field for international rivals, leading to increased competition, driving down fares. Finally, the strength of the dollar has increased operating costs and also had a negative FX impact on all non-US domiciled brands. As a consequence, Emirates' brand value is down 21% to US\$6.1 billion, however, it retains its AAA rating. In contrast, the US' airlines have all soared in value. The Gulf carriers' loss has been their gain, leading to 60%, 47% and 59% year on year for United, Delta and American, the last of which has become the world's most valuable airline brand.

Boeing and Lockheed Martin have grown impressively in brand value, rising 17% and 32% respectively. President Trump's commitment to increase military spending and his apparent economic patriotism have improved forecasts

and American brands in the industry can expect to benefit in the near future. Conversely, Airbus has seen a 10% drop in value. The company has been forced to rein in production of the A380 after winning fewer orders than expected, leaving the company in financial disappointment. Speculation has arisen that Airbus might consider cancelling the superjumbo, which would hurt the brand value further.

Lego has regained its status as the world's most powerful brand, based on Brand Finance's Brand Strength Index (BSI) assessment. The BSI is the part of Brand Finance's analysis most directly influenced by those responsible for marketing and brand management and so the brands that perform best are particularly worthy of attention. Lego scores highly on a wide variety of BSI metrics such familiarity, loyalty, promotion, marketing investment, staff satisfaction and corporate reputation.

The building blocks for Lego's brand strength have always been present. Its appeal spans generations; as well as the creative freedom it gives children, the brand appeals to the nostalgia of adults. It generally avoids gendered marketing, by appealing to boys and girls equally Lego maximises the size of its target demographic. That approach also pleases parents, as concerns mount over the effect toys may have on the outlook and ambitions of children, and girls in particular.

In the early 2000s, Lego was facing near bankruptcy. An overextended product range and problems with stock control had led the company to a nadir. The downward spiral was arrested following the appointment of Jørgen Vig Knudstorp, who discontinued unpopular ranges and ensured that all products were compatible with the core range, both visually and mechanically, helping to reverse the dilution of the brand and enhance brand equity. Since then a decade of repeated marketing and financial

successes have transformed Lego's fortunes.

The release of the Lego Movie in 2014 provided the final push required to make it not just a very powerful brand, but the world's most powerful brand in 2015. The film was both a critical and commercial success (it was the top grossing film of 2014 in the UK and Ireland), providing not just immediate revenue but also an unrivalled marketing tool. The first sequel, the Lego Batman Movie will be released on February 9th. Its predicted impact has helped Lego regain its top position, lost to Disney in 2016. Further releases are planned for September 2017, March 2018 and 2019, which will continue to build the brand for years to come, while contributing significantly to Lego's already vast licensing income.

Geographic expansion provides further opportunities for growth. Lego opened its first factory in China in Jiaxing in 2014 as well as a new Asian Head Office in Shanghai. China presents risks, including the fact that Lego cannot rely on the nostalgia or awareness that it has enjoyed in Europe and the US for decades, however it is also a huge opportunity. China is a vast market (there are nearly 150 million children under the age of 10) but domestic scandals over the safety of children's products leave fertile ground for a foreign firm with a reputation for reliability, high standards of production and for nurturing children's creative and cognitive development.

Whilst Lego will always draw its strength and brand identity from the simplicity of its tangible products, it is also responding to the digital era. Lego Boost, set to launch in August, allows children to turn Lego creations into programmable robots using a smartphone app. Meanwhile Lego Life, launched in the UK in November 2016, enables them to post pictures of their proudest creations or imagine new ones and makes Lego a profoundly social experience as well as a personal one.

Understand Your Brand's Value

A Brand Value Report provides a complete breakdown of the assumptions, data sources and calculations used to arrive at your brand's value. Each report includes expert recommendations for growing brand value to drive business performance and offers a cost-effective way to gaining a better understanding of your position against competitors.

A full report includes the following sections which can also be purchased individually.

Brand Valuation Summary

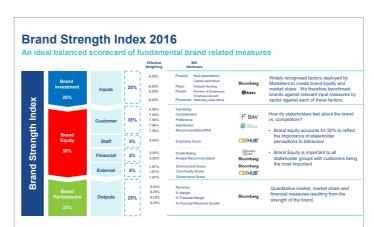

Overview of the brand valuation including executive summary, explanation of changes in brand value and historic and peer group comparisons.

- + Internal understanding of brand
- + Brand value tracking
- + Competitor benchmarking
- + Historical brand value

Brand Strength Index

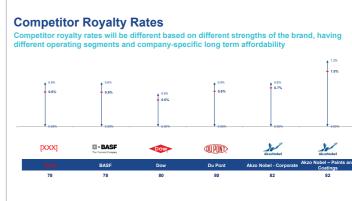

A breakdown of how the brand performed on various metrics of brand strength, benchmarked against competitor brands in a balanced scorecard framework.

- + Brand strength tracking
- + Brand strength analysis
- + Management KPI's
- + Competitor benchmarking

Royalty Rates

Analysis of competitor royalty rates, industry royalty rate ranges and margin analysis used to determine brand specific royalty rate.

- + Transfer pricing
- + Licensing/ franchising negotiation
- + International licensing
- + Competitor benchmarking

Cost of Capital

A breakdown of the cost of capital calculation, including risk free rates, brand debt risk premiums and the cost of equity through CAPM.

+ Independent view of cost of capital for internal valuations and project appraisal exercises

Trademark Audit

Analysis of the current level of protection for the brands word marks and trademark iconography highlighting areas where the marks are in need of protection.

- + Highlight unprotected marks
- + Spot potential infringement
- + Trademark registration strategy
