

Orange Polska

Towards 5G

Jean-François Fallacher
Chief Executive Officer
Orange Poland

5G in Orange Strategy

Smart utilities

5G for fix

Highly reliable, ultra low latency network parameters

Connected, intelligent home

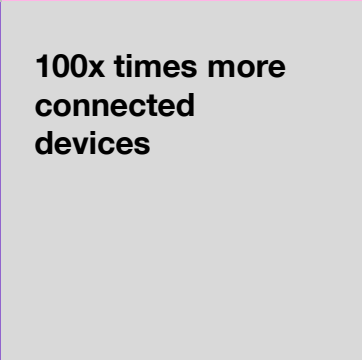

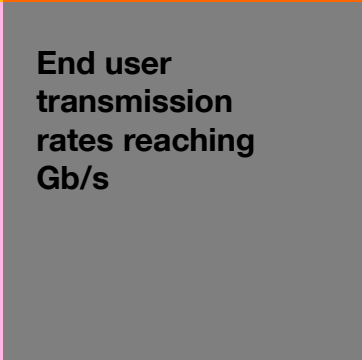

orange™

Dedicated networks

Seamless 4K video experience

Autonomous car

Wireless VR/AR 4K experience

**Ultra dense
access points**

**Fiber based
backhaul**

**Self-organizing
networks**

**Everything in the
cloud/virtualized**

**10 times
longer battery
time for IoT
devices**

**End user
transmission
rates reaching
Gb/s**

**1000 times
higher network
capacity**

**100x times more
connected
devices**

**End to end
delays reduced
to milliseconds**

5G ecosystem components

Spectrum

**5G
compatible
user
equipment**

**New RAN
and CORE**

**Improved
backhaul
and
transmission**

**Business
Ecosystem**

What does 5G in Poland need

- Spectrum managing: organizing „Band C” (3,4-3,8 GHz) key for 5G
- Level playing field

What does 5G in Poland need

Optimum spectrum allocation would be 4 blocks of 100 MHz

EU agenda for 5G

- **Align roadmaps and priorities for a coordinated 5G deployment across EU**

- **Make provisional spectrum bands available for 5G**
- **Authorization of the specific 5G spectrum bands above 6GHz**

- **Moving towards commercial large scale introduction by the end of 2020 at the latest**

Orange Group activity

2018

- **5G radio tests in Orange countries**

2019

- **Large scale 5G radio/core tests and field trials in Orange countries**

2020

- **Start of 5G deployment**

Orange Polska Road to 5G

2018

- 5G radio demos
- Preparations to build 5G ecosystem in Poland

2019

- 5G radio/core tests, field trials

2020

- Start of 5G deployment

Spectrum acquisition

Business Requirements & Strategy

Architecture and security

Spectrum and MNO cooperation

Network standards and tests

Devices

Legal issues/Regulations

Orange Group Alignment
