

Enabling Next Digital Wave

Dang Wenshuan (dangwenshuan@huawei.com)
Senior Network Architect , Strategy Marketing Dept
Huawei technologies Co. Ltd

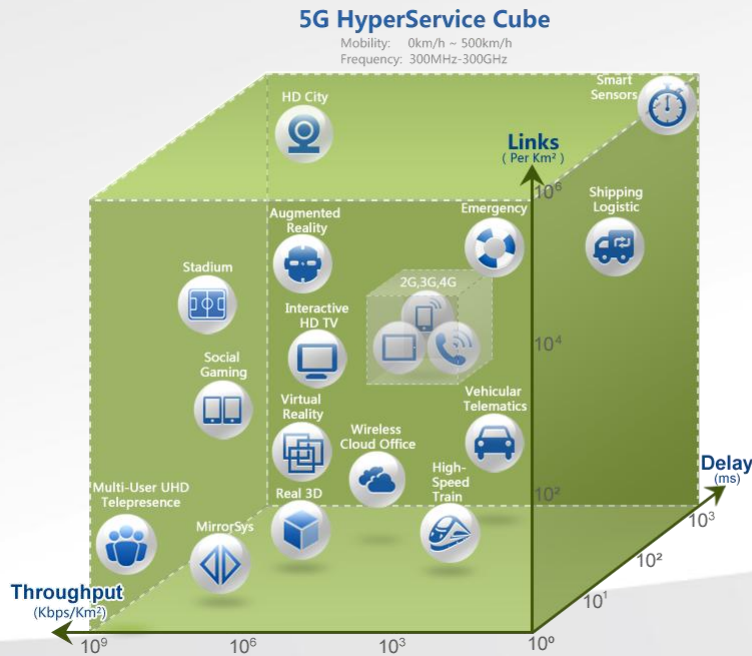

The future we believe...

- Internet as infrastructure, any organization will be internet based
- Internet mindset as nous, the internet as a term will disappear
- Internet=Mobile internet, all access will be wireless based
- Mobile broadband as common right

The changing era today...

- Connect everything is being accelerated, but massive things still unconnected yet
- The blurring boundary of licensed vs. unlicensed spectrum based connectivity service
- OTTs as major player of service innovation
- Winner takes all happens repeatedly in internet industry, LTE is taking more same way now...

The 5G we propose...

- Enable hyperservice, connecting digital and physical world into one
- Enable open innovation from day one, empower mass partners with one infrastructure
- Enable licensed & unlicensed & LSA...with single adaptive radio air-interface
- Enable any radio system under 6GHz into one unified standard...5G takes all!

Thank you
