

# **TERMINAL INTEGRATION & VALIDATION**

Daniel Michálek, International Senior Head of Terminal Integration & Validation

## **WHAT'S ON TODAY:**

- Who we are
- Natcos in Europe
- Testing programme
- Attractions
- Demonstration
- Discussion

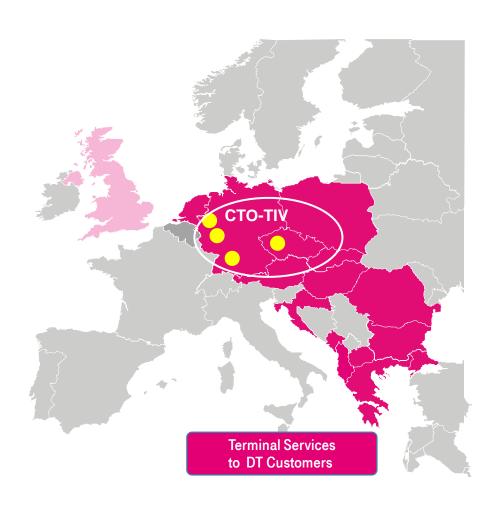

### **WHO WE ARE**

Deutsche Telekom Group Shared Service Center with extensive and unique terminal expertise in fixed and mobile devices and networks

### Terminal Shared Service Center (SSC)

- The DT unique competence center for fixed and mobile terminal expertise
- A virtual team of highly qualified experts experienced in the state-of-the-art terminal/network technologies in multiple locations
- Serves to 13 national companies
- Provides excellent mobile & fixed terminal integration & validation services
- Unique terminal knowhow & expertise and end-to-end network experience
- Drives the best terminals for the best networks

### **WHO WE ARE**

### Terminal Shared Service Center provides multiple, distinct service packages

- Terminal Shared Service Center
- Terminal knowhow & expertise
- End-to-end network experience

# Terminal Portfolio Mobile

certifies the DT portfolio smartphones, tablets, M2M modules, data sticks etc.

certifies the DT portfolio home gateways, speedphones adapters, bridges

key technologies, corporate priority services

e.g. LTE introduction, voice quality analyses, iPhone launches

### **NATCOS IN EUROPE**

European DT Group with presence in 13 countries

- Serves about 62 million mobile customers\*
- Produces approx. €14.4 billion of mobile revenue\*
- About 16 million of terminal products (per annum)
- And delivers the iPhone to all European markets\*
  (\* DT Company Presentation 2013)

### Terminal SSC integrated and validated products in 2013

New terminal products:

- "Superphone" smartphones
- "Ordinary" smartphones
- Tablets
- Voice phones
- Data products
- OEM/M2M modules

Lifecycle software releases for products in the field

### Several hundreds of products approved every year

### New terminal products:

- "Superphone" smartphones
- "Ordinary" smartphones
- **Tablets**
- Voice phones
- Data products
- OEM/M2M modules
- Lifecycle major software releases

### We drive new technologies

- We drove a test equipment vendor R&S to develop an LTE system simulator ensuring that the capabilities meet DT's requirements.
- As a result, we are able to test and certify early LTE device samples of our competitors and deliver first to market products to their customers.
- The first test package for performance and protocol tests released and launched in December 2012.

MyWallet Portfolio enabled for several countries

How do we manage?

### **Access**

- Test RAN environment
- Live net environment
- Local Natco environment

### Client

- Applications
- Services
- []
- Dashboard for MBB

### Innovation projects

- Joyn (RCSe)
- mWallet
- VolTE
- Hybrid Access
- Vectoring
- Carrier Aggregation

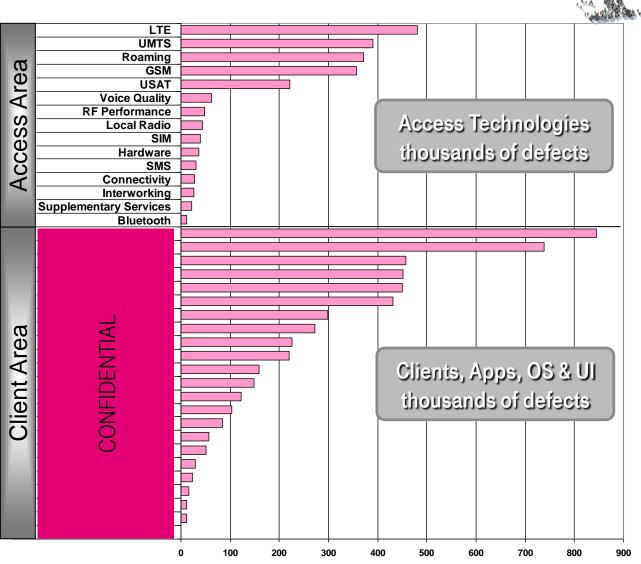

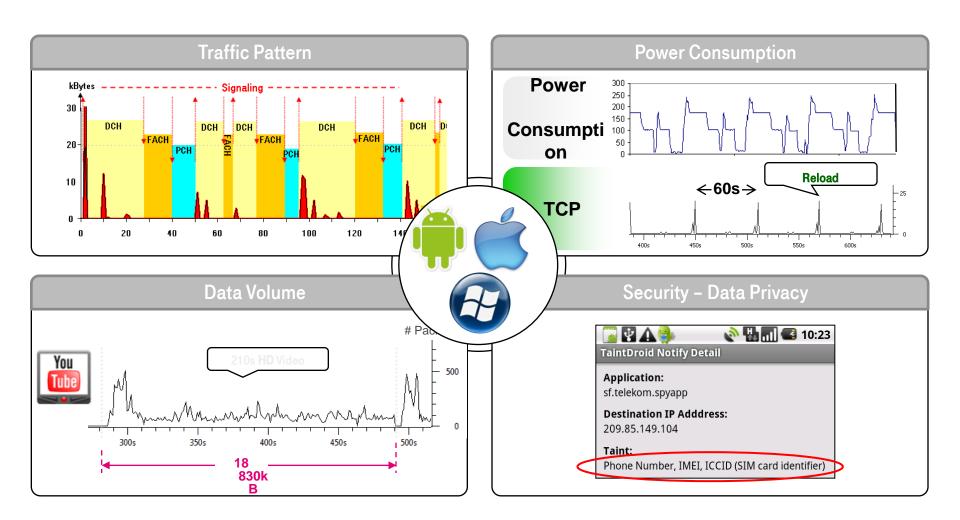

**Thousands** 

defects identified and addressed!

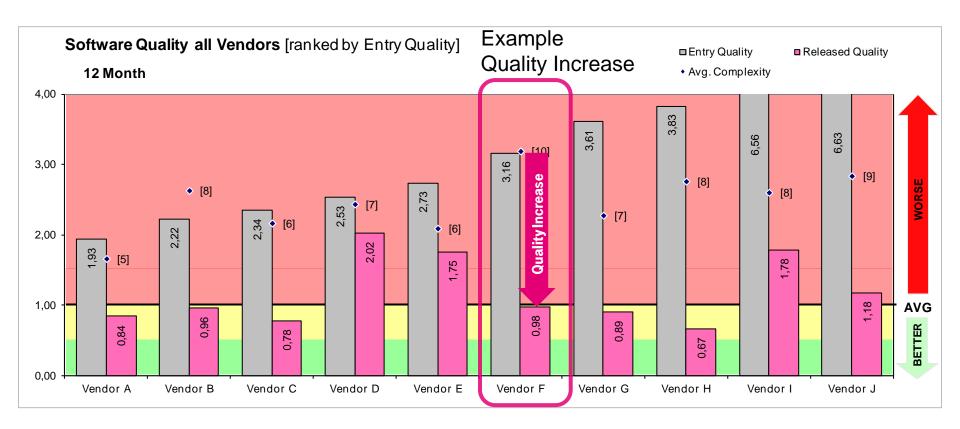

In 2013, more than 50 apps were analysed and improved for markets in PL, NL and CZ

- Benefits of DT's Terminal Validation Program
- Overview of SW quality OEMs delivered to DT for validation (Entry Quality) vs. SW quality released to customers (Released Quality) after DT validation

## **ATTRACTIONS**

### HERO DEVICES 2014

### **DEMONSTRATION**

### LIVE DEMO

Apps analysis presented by:

- Leonid Varlamov, Senior Expert, Terminal Integration & Validation
- Tomáš Nikodým, Senior Expert, Terminal Integration & Validation

DT Optimized versus Non-optimized Terminals presented by:

Michal Tripes, Senior Expert, Terminal Integration & Validation
